DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1) Claims 1-7,9-10,12-26 and 50-51 are rejected under 35 U.S.C. 102(e) as being anticipated by Morison et al. (USPN 6,296,642). Morrison et al. discloses a medical implant with head 11, spaced arms and, a "closure member 12 adapted to be threadedly engaged" having a "generally cylindrical" portion, a clear implication that the threads are helically wound about the body of the implant in a continuous manner (column 3, lines 50 & 66). In column 3, lines 54-59, Morrison et al further disclose a second implant, "a receiver member 11" which "includes a longitudinal or thread axis". This device also includes "a transverse channel 16 for receiving an elongated member, which is generally perpendicular to axis 14 and bore 15". In lines 35-42 of column 4, Morrison et al disclose that "threads 44 and 46 are reverse angle threads" meaning

Application/Control Number: 09/644,777

Art Unit: 3732

that the "rearward-facing thread surface" is "sloped so that, for a given cross-section of the thread through the longitudinal axis of the screw, a point is closer to the distal or forward end of the screw that a point on the rearward-facing thread surface at the crest of the thread". Further, with respect to Claims 2-6, "in one particular embodiment of the present invention, illustrated in Fig. 4, pressure angle α is -5 degrees, and flank angle β is 45 degrees. However, it is understood that one of ordinary skill in the art would recognize that other negative values of pressure angle α, including values between about -1 degree and at least -40 degrees, and other values of flank angle β are within the scoped of the present invention. As noted above, reverse angel thread 44 of receiver member 11 is configured substantially similarly to reverse angle thread 46 of closure member 12 so that threads 44 and 46 can be engaged" (col. 4, lines 64-67 & col. 5, lines 1-7). In addition, "channel 16 is bounded on both sides by legs 20 of receiver member 11". In regards to Claims 14-16, as shown in Figures 1-3 of Morrison et al, the leading and trailing surfaces are spaced at substantially the same radius creating a generally obtuse triangular cross-section. Referring again to the Figures presented by Morrison et al, it is clear that Claims 21 are anticipated by Figures 1-3 where β and α are shown to create a cross-section generally triangular in shape.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Morrison et al in view of Reed (USPN 5,499,892). Morrison et al discloses the claimed invention except for the threadform is a discontinuous helical pattern. Reed teaches a threadform with a helical discontinuous pattern. It would have been obvious to one having ordinary skill in the art at the time of the invention to incorporate the helical discontinuous pattern of the threadform taught by Reed into the threaded implant disclosed by Morrison et al in order to prevent easy removal of the closure from the implant thereby providing an increased interference fit.

Response to Amendment

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

The Supplemental Declaration filed on 10/17/06 under 37 CFR 1.131 has been considered but is ineffective to overcome the Morrison reference.

The evidence submitted is insufficient to establish a reduction to practice of the invention in this country or a NAFTA or WTO member country prior to the effective date of the Morrison reference. In addition to the Declaration, evidence must be shown to support claims made in the

Application/Control Number: 09/644,777 Page 5

Art Unit: 3732

Declaration as to the reduction of practice of the present invention prior to the effective date of the Morrison reference. The absence of such evidence has not been satisfactorily explained.

(See MPEP Rule 1.131 (b)).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Candice C. Stokes whose telephone number is (571) 272-4714. The examiner can normally be reached on 8:00am - 4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cris Rodriguez can be reached on (571) 272-4964. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
